	postgraduates, and faculty members	
	in these crucial areas of tuberculosis	
	management and prevention.	

Date: 2st March 2024 Venue: 1st floor lecture hall, college building, SIMS & RC

Warm greetings to all!

Tuberculosis (TB) remains one of the worlds deadliest infectious killers. About quarter of the global population is estimated to have been infected with TB bacteria. About 5-10% of people infected with TB will eventually get symptoms and develop TB disease. Global efforts to combat TB have saved an estimated 75 million lives since the year 2000.

The theme of World TB day 2024 is 'Yes! We can end TB!'. The theme brings attention to TB and that it is in our collective power to end TB by 2030 and therefore reach the Sustainable developmental goals.

The theme aims to inspire hope and encourage high level leadership, increased investments, faster uptake of new WHO recommendations, adoption of innovations, accelerated action and multi-sectoral collaboration to combat the TB epidemic.

We know that we can end TB! So, let us all commit to making change happen for the year 2024 and collectively say 'Yes! We can end TB!'
